REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Concerning claims 32 and 35-72, no prior art has been found teaching or suggesting a pair of oligonucleotide probes nor method of using that comprise a first and second clamp section and target section, respectively wherein said claim sections are located essentially adjacent to one another when the 5' end of one probe is adjacent to the 3' end of the other. The first clamp segment is capable of hybridizing to a second clamp segment of the second probe. The first target segment at its 3' end is capable of hybridizing to a first segment of a target DNA sequence to be detected. The second clamp segment is capable of hybridizing to the first clamp segment. The second target segment at its 5'end is capable of hybridizing to a second segment of the target segment. The first segment and the second segment are located adjacent to one other in the target DNA sequence. The 5'end of the first segment is adjacent to the 3' end of the second segment.

Concerning claim 70, no prior art has been found teaching or suggesting a set of at least three oligonucleotides suitable for SNP genotyping. The set of at least three oligonucleotides comprises a first oligonucleotide probe, a second oligonucleotide probe and a third oligonucleotide probe. The first probe and the second probe have the same features as the first probe and the second probe as recited in claim 32. The third probe comprises a second clamp segment and a second target segment. The second probe and the third probe include an allele-specific nucleotide located at the end of the first target segment or the second target segment. The allele specific nucleotide of second probe and the third probe corresponds to the alleles of

Art Unit: 1637

the SNP to be detected. The second probe and the third probe further include a stuffer segment that discriminates between amplified ligation products formed between P1 and P2 or P1 and P3.

The closest prior art is the reference of Hogan et al. (5,424,413, Jun. 13, 1995). Hogan et al. disclose nucleic acid hybridization probes having at least one nucleic acid strand which has at least two separate target specific regions that hybridize to a target nucleic acid sequence, and at least two distinct arm regions that do not hybridize with the target nucleic acid but possess complementary regions that are capable of hybridizing with one another (see the Abstract). Hogan et al. do not disclose a pair of oligonucleotide probe which has difference in the orientation of the probes as to the target DNA sequence to distinguish over the orientation of the Hogan probes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
